## Among a host of other services, we offer you the following Professional Services Consulting Packs

**Start-Up  
Consultancy  
Pack**

**Go Live  
Review  
Pack**

**Application  
Health  
Review Pack**

### Start-Up Consultancy Pack

This pack will help you to accelerate your process automation with Skelta BPM. Senior Consultants from Invensys Skelta will work with your IT team to automate your first process with Skelta BPM. We will also help in translating business requirements to software requirements.

What's in it for you?

- Bring in process implementation experience
- Jump start your first process implementation
- Start with best-practices configuration
- Gain valuable knowledge from BPM pioneers
- Avoid pitfalls of enterprise implementation and gain from our consulting experience

## How do we assist you?

Our consultants will review your:

- **Requirements Specification:** An Invensys Skelta Consultant will work with your IT team to review the list of requirements you have.
- **Software Specification:** We will work with you to translate business requirements into a software requirements document, jointly working with your IT team.
- **Application Integration:** We will help you leverage on the application integration capabilities of Skelta BPM and ensure you derive more from not just Skelta BPM but also your legacy enterprise applications.

We will also guide you in:

- Mapping processes to be automated using Skelta BPM
- Building relevant solution components
- Configuring process reports and KPIs
- Building test cases to test the process flow and the application
- Ensuring the application goes live
- Managing end user expectations within the solution

## Go Live Review Pack

Our consultants will assist in reviewing your BPM application implementation before the application goes live in the production environment, identifying any performance or implementation bottlenecks.

## What's in it for you?

- Avoid any surprises once the application is live
- Increase efficiency and throughput
- Transfer valuable knowledge to your workforce
- Identify and correct today's performance issues which can cause tomorrow's failures
- Gain on optimized workflow design
- Maximize utilization of Skelta BPM in application integration
- Ensure faster end user acceptance of the solution

Our professional services starter package helps you quickly automate manual processes and improve efficiencies, so that you can win more business and serve your clients better.

## How do we assist you?

Our consultants will review your:

- **Architecture and Design:** This will ensure that the product is designed for high performance and efficiency.
- **Workflow Design:** We will review workflow design and ensure that workflows are configured correctly and efficiently.
- **Application Integration:** We will review your integration with legacy application integration.
- **Comprehensive Feature Utilization:** We will assist you in better utilizing Skelta BPM's rich feature set and collapse development time thus enabling a faster time to value for your application
- **Application Performance:** Our consultants will review your application for performance and suggest custom development that can circumvent any challenge.

Our consultants will partner with you to provide solutions that address your problems, and ensure you derive greater value from Skelta BPM.

## Application Health Review Pack

This is designed as an audit to ensure your application is healthy and business processes are efficiently running.

### What's in it for you?

- Ensure optimum application performance
- Ensure data and workflow integrity
- Benefit from comprehensive analysis

### How do we assist you?

- **Application Security Analysis:** We review automated processes to check for potential security glitches.
- **Server Performance Analysis for Current and Future Use:** We review current application infrastructure and its ability to handle current and projected future load.
- **Peak Performance Analysis:** We analyze application performance application at peak usage and suggest improvements.
- **Process Data Analysis:** We analyze various process variables, to validate if any invalid process data is maintained in the automated processes.
- **Workflow Design:** We will review workflow design and ensure that workflows are configured correctly and efficiently.

Our Application Health Review Pack enables you to leverage on our rich experience in analysis and performance review of your business applications.

## About Skelta BPM

Skelta BPM is an enterprise class Business Process Management (BPM) platform that eliminates the risk of process initiatives, enables communication amongst all process stakeholders and drives innovation by fostering business ownership. Skelta BPM empowers business analysts to quickly build end-to-end, feature rich, process centric, composite business applications using a web interface.

Skelta BPM enables quick automation and improvement of processes without any coding. Skelta BPM components support every step in the lifecycle of a process based application, namely – Envision & Model, Execute & Deploy and Optimize & Analyze.
